Predictive Model for Identifying Pneumonia in Pediatric Patients in Sri Lanka

Team

Charlie Losche - Data Scientist

[GitHub](#) | [Linkedin](#) | [Email](#)

Overview

Pneumonia is the single largest infectious cause of death in children worldwide.

- Pneumonia accounts for 14% of all deaths of children under 5 years old, killing 740,180 children in 2019
- Pneumonia caused by bacteria can be treated with antibiotics, but only one third of children with pneumonia receive the antibiotics they need.

Gates Foundation - Pneumonia Initiative

1

Initiative: Rural hospitals in Sri Lanka received X Ray machines to address pediatric pneumonia.

3

Solution: Build model to ID pneumonia based on an X Ray alone.

2

Problem: No available radiology techs and low capacity of Doctors to review imagery..

4

Deliverables:

1. Model
2. Deck
3. Repository of Work

Datasets and Scope

Data

01 | Kermany et al. Xray imagery

Data Structure

01 | Chest X rays - Normal vs Pneumonia

02 | Training

03 | Validation

04 | Test
